Technology Stack

- HTML/CSS/SASS
- JavaScript [ES6+]
- React JS,
- Next JS,
- Vue JS,
- Typescript,
- GraphQL,
- Redux,
- Strapi,
- Node JS
- Express
- Unit Testing
- Web Sockets
- PWAs

Professional Summary

I'm a frontend software developer, passionate about solving problems with code and transforming ideas from pixels to scalable products. I create usable applications with user experience as a top priority using various web tools, languages, and technology.

Work Experience

1/1/2022 - current

Chowberry,Abuja,Nigeria

Joined as part time QA engineer

- Organizing sprint meetings
- Understanding software requirements and how they contribute to new features of the application
- Task Monitoring and deadline scheduling

03/3/2021 - 06/06/2021

Zuri Training - Lagos Nigeria (Internship)

Took part in this training while working with Cfao Motors to brush up my fundamentals

- HTML, CSS and JavaScript
- Responsive Web Design
- Object-Oriented Programming
- Web Accessibility
- Test-driven development
- Working with APIs
- Working with several frameworks (among others)

2/2/2021 - 6/2/2021

Campusss,Lagos Nigeria (Contract)

Joined the Campusss team in building an online social Educational Platform

- Built complex layouts and components with React & SASS
- Managed app state with react hooks
- Worked closely with a senior engineer to implement app features with a Postgres database, typescript, and the MVC pattern

7/12/2019 - 31/11/2021

Cfao Motors Nig Ltd, Lagos Nigeria

Joined Cfao Motors for my National Service

- Automated daily task that need authorization using Power Automate
- Developed a web portal with React, to manage the company files and documents
- Planned and setup a training center for E learning to limit contact between staffs

1/6/2019 - 31/12/2021

360 M3DIA ,Calabar Nigeria (Volunteer)

Joined the team after my graduation as I awaited National service

- Used Next Js to deliver optimized, pre-rendered pages when necessary.

- Engineered state management with Redux and Hooks.

- Pulled data from the blockchain in real time to display live statistics and token prices.

- Visualized blockchain data using charting libraries and custom paginated tables.

- Maintained a well-structured codebase and used Typescript to improve predictability.

- Implemented API request caching on the server to save resources, improve performance and generally reduce the load on the backend.

1/1/2018 - 6/1/2018

525 System, Calabar Nigeria (Internship)

Joined the 525 system as an intern as part of my Industrial attachment

- transformed figma prototypes for a fintech application to a functional UI using react js combined with context

Api for state management and sass for styling

- Made use of tools like Notion & Usepastel for task management and feedback

- Interacted with GraphQL apis from the client-side using Apollo GraphQL

Education

2015 - 2019

Babcock University, Ogun State. Nigeria

BSc Computer Information System

Relevant Coursework: Software Engineering Fundamentals,

Computer Programming, Computer Architecture,

Algorithms and Data Structures, Systems Programming, Machine

and Assembly Language Programming, Digital

Electronics, Digital Computer Design, Microprocessors &

Microcomputers, Database Management, Computer

Networks, Information Theory & Coding, Numerical Methods in

Engineering, Technical Communication.

Languages

English

— C2
